## **DETAILED ACTION**

### ***Allowable Subject Matter***

All claims are allowed. Claims 1-34 are allowed. The following is an examiner's statement of reasons for allowance: As noted in the prosecution (such as in the Remarks section of the latest amendment and the specification, e.g., pages 1-4 of the specification), the claimed inventions are meant to be within the situation of provide a digital watermarking device which inserts several types of digital watermark information into the digital information and detects the digital watermark information from the digital information with several types of digital watermark information inserted. At page 14 of the Remarks, Applicant notes that the time stamp recited in Applicant's claims refers to a property of audio/video data in which timing information embedded in multiple frames is used to synchronize the audio and video portions of the data to each other. The time stamps recited in the claims have nothing to do with the actual time and date when the audio/video data was produced. Additionally, the present invention as recited in Applicant's claims does not embed a watermark containing the time stamp, but rather embeds a watermark containing a predefined information type at each time stamp location in the digital information file. Applicant's disclosure, throughout, provides examples of information types that are conceived as being embeddable as watermarks. Such information types include: owner ID No., reproducibility, etc. On this matter, Applicant has cited page 19, lines 5-10 to be incorporated into the meaning of the claims. The prior art did not teach or suggest the particular features of the claims.
